BEFORE YOU READ

How this PPM software comparison works

ITM Platform publishes this page and makes one of the products on it. Every product is described with the same fields. Each statement about another vendor links to a public source, and each entry says when that product is the better choice.

The order is not a ranking. ITM Platform comes first because we publish the page. The other PPM products follow in alphabetical order, and then the work management tools that buyers often compare with them.

A product is added once its facts have been checked against the vendor's own documentation. Each source shows the date it was consulted.

What the product covers

Portfolio prioritization and strategy, project delivery, resources and capacity, financial management, services and non-project work, and reporting.

How it fits your systems

AI and agents, integrations and extensibility, and security, compliance and hosting.

What it takes to buy and adopt

Pricing, licensing and packaging, implementation and time to value, and the vendor's ecosystem and customer base.

- Used by more than 123,000 organizations [238]

Limits

- Time tracking and roles need Resource Management, sold by quote [239, 240]
- Budgets are built in sheets; revenue recognition is not documented [241, 242]
- Portfolios, scenarios and single sign-on need Enterprise [88]
- No on-premise option [93]

WHAT ADOPTION NEEDS

Smartsheet starts from a self-service trial and templates. Larger rollouts use paid professional services or one of more than 750 partners. [88, 95]

COMPARED WITH ITM PLATFORM

Choose Smartsheet for a spreadsheet-style platform with strong reporting, AI and integrations. Choose ITM Platform for portfolio selection, resources, timesheets and finance in one product, with free licenses for team members. [230, 232]

METHOD AND SOURCES

How we compare products

How this comparison was made

1. The same twelve criteria are used for every product. They group the categories of ITM Platform's public PPM checklist and add security and the vendor's ecosystem.
2. Statements about the other products come from public sources: the vendor's documentation, release notes, recorded demos, legal terms and marketplace listings, then review sites and analysts. A capability named only on a product page or in a brochure is marked not documented. Each source carries a numbered link and the date we consulted it.
3. Scores go from 0 to 5 against a published scale. A product is scored on what public sources establish. Where they do not establish the answer, the item is marked not scored or not documented: ask the vendor to show it. A capability that works the same way in both products gets the same mark.
4. Scores refer to the product whose price is shown. When a gap is covered by another product of the vendor, a paid add-on or a marketplace app from another company, the page names it with its price. It raises the score only when its price is included in the comparison.
5. We did not run a hands-on test of the other products. Statements about ITM Platform come from its documentation and from the product.
6. The criteria are not weighted and there is no total. Weight them by what matters to your organization.
7. Where the other products are stronger, the page says so. ITM Platform's own limitations are listed too.

Who wrote it

ITM Platform wrote and paid for this comparison and makes one of the products compared. Read it as a vendor's assessment and check the sources.

We check the facts for changes every month, and sooner when a vendor changes pricing or ships a major release. The date at the top of the page is the month of the last check.

If a statement is wrong or out of date, send us the correction with a public source. We correct verified errors.

To score products with your own criteria and weights, use the PPM comparison template.

Scoring scale

Score	Meaning	When it applies
5	Complete	Covers the criterion natively, with public evidence and no material gap.
4	Strong	Covers it well. The gaps are minor for most buyers.
3	Partial	Covers the core. Material gaps remain, or the buyer needs configuration work.
2	Limited	Mostly available through development, add-ons or third parties, or only on request.
1	Marginal	Touches the criterion without a usable answer.
0	Not covered	Public evidence shows the criterion is not covered.
Not scored	Insufficient evidence	Public sources do not establish the answer. The reason is given next to the criterion.
